

**Amendments to the Claims:**

The following listing of claims replaces all prior versions and listings of claims.

**Listing of Claims:**

1. (Currently Amended) ~~[[A]]~~ The HD media player of claim 26 further comprising:  
a high definition output terminal configured to communicate a high definition video signal to ~~[[a]]~~ the HD ~~high-definition~~ display;  
at least one port configured to receive the portably-stored content from a portable storage device; and  
a controller coupled to the at least one port and to the high definition output terminal, the controller configured to select an image file from the portably-stored content and to generate at least a portion of a high definition image on the HD ~~high-definition~~ display.
2. (Currently Amended) The HD media player of claim 1 further comprising a screen saver module configured to monitor the high definition video signal.
3. (Currently Amended) The HD media player of claim 2 wherein the screen saver module communicates one or more screen saver images for presentation on the HD ~~high-definition~~ display when the high definition video signal is substantially absent.
4. (Currently Amended) The HD media player of claim 2 wherein the screen saver module communicates one or more screen saver images for presentation on the HD ~~high-definition~~ display when a degree of motion associated with the portion of the high definition image is outside a range of motion.

5. (Currently Amended) The HD media player of claim 4 wherein the range of motion is defined by a number of pixels associated with the portion of the high definition image, each of the number of pixels sufficiently depicting motion.
6. (Currently Amended) The HD media player of claim 1 further comprising a media insertion manager module configured to automatically present the portion of the high definition image after the image file is discovered.
7. (Currently Amended) The HD media player of claim 6 wherein the image file is an auto-run file.
8. (Currently Amended) The HD media player of claim 1 further comprising a light sensor module configured to detect a level of brightness and selectively alter characteristics of the high definition image.
9. (Currently Amended) The HD media player of claim 1 further comprising a view orientation manager module configured to orient the display of the high definition image.
10. (Currently Amended) The HD media player of claim 1 further comprising a thumbnail resolution manager module configured to reduce the amount of data required to present a miniaturized high definition image.
11. (Currently Amended) The HD media player of claim 1 further comprising a smart display manager module configured to minimize an amount of space not used to display the high definition image.
12. (Currently Amended) The HD media player of claim 1 wherein the portable storage device is a compact flash card.
- 13-25. (Canceled).

26. (Currently Amended) A system for displaying electronic art comprising:  
a high definition ("HD") display; and  
a HD media player coupled to the HD display and configured to receive portably stored content on a computer readable medium, the computer readable medium including  
instructions for generating a first HD video on the HD display,  
instructions for generating a second HD video on the HD display,  
instructions for generating an overlaid animation,  
instructions for providing an event indicator to indicate that an event associated with the overlaid animation has occurred, and  
instructions for switching from the first HD video to the second HD video upon detecting the event indicator,  
wherein the overlaid animation is a clock.

27. (Canceled).
